Dates of Fellowship: 01.09.-28.10.2016.

Detailed description on Teaching received:

- The systematic approach in diagnosis and follow up of oncologic patients.
- Transvaginal, transrectal and transabdominal examination as well as the examination with linear probe of gynecological patients.
- Ultrasound evaluation of prognostic parameters and response to treatment.

Goals accomplished:

I found this is a great experience and opportunity to see the difference in oncologic approaches. I would emphasize the importance of ultrasound examination performing in this hospital that will help us, in the institution where I work, to improve the diagnoses and some oncology decisions.

Achievement in clinical practice:

This kind of ultrasound examination will help us to offer our patients faster and cheaper diagnostic modality which is as good as one they had so far.

Presentations eg. at seminar or meetings:

- Meeting in Oncology Institute of Vojvodina
- Faculty of Medicine, University of Novi Sad, presentation to residents in training

Research performed and outcome:

I will start research of endometrial cancer patients in the hospital I work at with support of my mentor from Prague.

Problems encountered with a critical evaluation of the fellowship experience as a whole:**Future plan on returning to home:**

To share this experience with my colleagues and start doing the study I have mentioned before.

Overall evaluation and comment of the fellowship:

This was the great experience that I would recommend to everyone. It is not only to see some kind of examination but make the new contacts that will help us to share ideas and make it better.
