

APPLICATION FORM FOR the NATIONAL REPRESENTATIVE OF ESTONIA

First name:	Aleksandra
Last name:	Šavrova
Country:	Estonia
Hospital:	North Estonia Medical Center
Department:	Gynaecology Center
Current position:	Senior gynaecologist

Dear Sir/Madam,

I am a senior gynaecologist in North Estonia Medical Centre in Tallinn. My main area of interest is oncogynaecology. I am working in the biggest hospital of Estonia which has a multidisciplinary team approach in treatment gynaecological tumours (surgery, chemo – and radiotherapy). I am very dedicated and hardworking person with strong social skills. I am always looking for new opportunities to learn something new and become stronger professional. I believe it is very important in our field not just to learn but also share our knowledge with colleagues. I am an active member of ESGO/ENYGO since 2012. I actively took part in ESGO congresses and workshops. My main scientific interest is uterine cervical cancer and it is a theme for my PhD project.

Estonia is a small country and that is why we have limited possibilities for development. It is very important for our country and for development of medicine to be actively involved in partnership with other countries to learn and share experience. Being a National Representative of Estonia, my primary task is going to be a development of great connections with colleagues of other countries. I hope I will get a chance to create new collaborations with the same highly motivated and enthusiastic people. Being a board member of Estonian Society of Colposcopy and actively taking a part in this Society work and organisation of its meetings for members I am going to encourage young doctors to be a part of international collaborations, to help to meet more colleagues from different countries in order to share ideas, challenges and creating international team communication.

I hope I will have a chance to create great things.
