<b>Hospital:</b>	Saint Petersburg Oncological Center
<b>Department:</b>	Gynaecological
<b>Current position:</b>	Physician

### Motivational Statement (250 words)

Dear colleagues and friends!

Last year we bumped up against pandemic challenges and restrictions. Many of our ENYGO family plans were changed or abandoned. Russia was not an exception. On the other hand, a vast majority of rapidly developing online educational initiatives allowed us to obtain high-quality knowledge directly from our office. Russian ENYGO community with help of all members successfully mastered most of the challenges. Unfortunately, some projects were postponed, such as free of charge experience exchange program between oncological centers in Russia, which allows doctors to spend up to one month in any Russian clinic. Hopefully, we can finish it in the future. It seems that the situation can change quite soon. Thus, this year I am visiting Mayo clinic as a national representative of Russia to share our experience and bring fresh thoughts and ideas. Also, I have embarked on a postgraduate program in Skolkovo business school 'Public health management. Leaders of changes' which will help me not only to organize new projects but also to manage our current programs more effectively. We are continuing our collaboration with ENYGO\ESGO in the Russian webinars project. I have organized a significant part of them and invited to

moderate sessions in the future. Our webinar 'Sentinel node mapping for vulvar cancer' collected the largest audience. The number of followers of our Facebook 'Oncogynaecology' page rising rapidly. Through this web I also help people to establish a relationship with European and USA clinics or physicians they are interested in. I am very appreciating your trust and help for the last two years. I would be happy if I can do much more for our Russian community.
