

Gabrijela Sopta Primorac

Croatia

My motivation to join the ENYGO Executive Group is driven by a deep commitment to advancing high-quality gynaecological oncology care and to fostering the growth, visibility, and empowerment of young professionals across

Europe.

As the first National Representative of ENYGO in Croatia, I have played a central role in establishing a stronger national presence for ENYGO, actively promoting its mission, values, and opportunities within the professional community. One of my key achievements was successfully organising the first World GO Day event in Rijeka, which later expanded into a nationwide initiative. This project significantly enhanced public and professional awareness of gynaecological cancers and demonstrated the importance of international advocacy and collaboration.

As an invited speaker at various congresses, I consistently highlight the importance of ENYGO and encourage active engagement among young clinicians.

As a member of the ENYGO Social Media Committee, I contribute to strategic communication, outreach campaigns, and visibility efforts. I am a proactive and reliable contributor, regularly participating in tasks and supporting initiatives aimed at strengthening ENYGO's impact and reach.

Additionally, I contributed to organising the Croatian Society of Gynaecologic Oncology (HDGON) congress, which was ESGO-endorsed. This experience further expanded my leadership, coordination, and multidisciplinary collaboration skills. Combined with my clinical dedication to evidence-based, guideline-driven care, these experiences align closely with ESGO's commitment to excellence, education, and harmonisation of standards across Europe. I am highly motivated to bring my leadership skills, strategic mindset, and strong commitment to community building to the ENYGO Executive group.

Curriculum vitae

My name is Gabrijela Sopta Primorac, a gynecological oncology subspecialist from Rijeka, Croatia.

Over the past years, my clinical, academic, and organizational work has increasingly aligned with ENYGO's mission of strengthening collaboration, education, and support among young gynecological oncologists in Europe. This is the main reason I am applying for the ENYGO/EEG Board.

After completing my residency in gynecology and obstetrics and becoming a specialist in 2020, I pursued further training in gynecological oncology and completed my subspecialization in 2023. Alongside my clinical work at the Clinical Hospital Centre Rijeka, I am actively engaged in research as a PhD candidate in the field of molecular diagnostics in endometrial cancer.

I am also involved in medical education as an assistant at the University of Rijeka Faculty of Medicine, which has strengthened my interest in structured training and mentorship for young colleagues. In addition to my academic and clinical activities, I am deeply involved in the Croatian Society of Gynecologic Oncology, where I participate in educational initiatives and the organization of national congresses. This experience has provided me with practical insight into coordinating professional events, fostering interdisciplinary dialogue, and engaging with both junior and senior colleagues—skills that I believe are valuable for contributing effectively to the ENYGO/EEG Board.

Having served as the ENYGO National Representative for Croatia since 2023, I have gained a strong understanding of ENYGO's structure, priorities, and challenges. I would now like to build on this experience by contributing at the European level and supporting the development of projects that empower young gynecological oncologists.
